

## AMAZON + SSE

**Working with Amazon:** SSE understands the traffic circulation challenge that Amazon faces at the Fulfillment Center during the holiday season and will apply the creative problem solving techniques we have shared with hundreds of other clients to help you develop an effective traffic operations and parking plan.

**Innovative Design Concepts:** At SSE we routinely develop creative ways to best maximize the existing infrastructure to accommodate peak traffic and parking characteristics of our clients' facilities whether it's a sporting event releasing thousands of spectators onto the streets, a hospital shift change or a retail facility during the holidays.

**On-Site Transportation Services:** In addition to traffic engineering and parking management expertise, our in-house staff also consists of a pedestrian and traffic management field team. Developed by SSE, this unique group is comprised of mostly former law enforcement personnel. They are trained and certified and manage traffic and pedestrians at locations including sporting areas, shopping malls and special events.
